

Automatic dispensing machine for optical module production

The equipment supports multiple configurations to meet the requirements of high-precision encapsulation, filling, bonding, assembly and other dispensing processes under complex conditions.

Our modules combine high-precision volume dispensing with easy cleaning and intuitive operation.

Laser height measurement shall be equipped to ensure the dispensing stability; Various kinds of products can meet the rapid and flexible line change production of multiple products; The ...

Get a complete automated fluid dispensing system from Nordson EFD, integrated with our valves, jetting technology, dispensers, and consumables. We will help you customize one ...

Second Intelligent has 20 years of professional R& D and manufacturing experience in glue dispensing machines, automatic potting machines, coating machines, and liquid dispensing ...

With optical needle calibration, automatic height measurement, and an intuitive CAD programming interface, the D20 delivers high accuracy for low- to medium-volume production. See how its ...

Offering high-precision automatic dispensing systems for SMT, semiconductor, and optoelectronic production lines. Compatible with single/dual-component adhesives with flexible configurations.

Whether you're building smartphones, LED modules, EV control boards, or medical devices, vision-enabled dispensing is your gateway to zero-defect production. Specialize in cnc ...

The fully automatic dispensing system is constructed through the construction of a mechanical structure, the selection of optical equipment, and the debugging of the control system. ...

Fully automated dispensing systems from bdrtronic can be flexibly configured depending on the area of application and perfectly matched to the respective application.
