The radius for cable ladder and cable tray fittings is usually determined by the bending radius and stiffness of the cables installed on the cable ladder or cable tray.

Cable Tray is sized based on the number and type of cables required for the current and future need. A 50% fill ratio should equal the maximum number of cables pulled in a given cross section.

The content of alloy elements in stainless steel bridge material itself has an important influence on its surface anti-rust. Usually, the steel with 10.5% chromium content is not easy to rust.
