

# Does fiber optic cable not require a router

Here's the quick answer: fiber internet does not require a traditional modem. Instead, it uses an Optical Network Terminal (ONT) to handle the conversion of light signals into digital data.

The good news: Fiber-optic internet does not require a special router in most cases. Since the ONT handles the signal conversion, you can use virtually any quality router that supports ...

Fiber internet relies on an Optical Network Unit (ONU), eliminating the need for a traditional modem and streamlining home connectivity with faster, more reliable signals.

Most fiber ISPs, including Mercury, provide an ONT that connects directly to your router via an Ethernet cable. This means you don't need a specialized modem-router device, but your ...

You still need a router: The ONT converts the fiber signal but doesn't distribute Wi-Fi. You need a router connected to the ONT to get wireless coverage throughout your home -- either a ...

The short answer is no. Fiber internet connections do not use traditional modems. Instead, they typically rely on an ONT, which is short for Optical Network Terminal, or a fiber optic modem. These devices ...

The short answer to this question is that you do in fact still need a modem to work with fiber internet. For more specifics on why you still need a modem and what kind you'll require, take a gander at this.

The short answer is no, you don't necessarily need a special router for fiber optic internet. However, having a router that is optimized for fiber optic internet can make a big difference ...

If you do not have the right router, your internet speed will be limited no matter how fast your fiber optic connection is. It's like having a fast sports car but driving on a busy street, where it cannot reach its ...

You don't need a special router, per se, but you do need one that can handle the speed fiber provides. If you're paying for gigabit fiber service, make sure your router supports at least ...
