

Fat distribution box model

Body fat distribution refers to the pattern of fat accumulation in different areas of the body, which can be characterized by body types such as android, gynoid, and intermediate.

In the study, 66 male and 54 female participants were scanned by MRI and a stereovision body imaging (SBI) to measure participants' abdominal VAT and SAT volumes and the BSDs. A fuzzy c-means...

Here, we report a deep learning model trained on an individual's body shape outline--or "silhouette" --that enables accurate estimation of specific fat depots of interest, including visceral ...

Both total adiposity and fat distribution influence systemic metabolism, and variations in both parameters are associated with risk for metabolic diseases. The concept that anatomically distinct ...

Women have more body fat than men, but in contrast to the deleterious metabolic consequences of the central obesity typical of men, the pear-shaped body fat distribution of many women is associated ...
