

Height of 40 bridge erecting machine

The JP50/40 launching girder gantry crane efficiently handles the assembly and erection of segmental box girders with spans of up to 40 meters.

The bridge erecting machine is light in weight, compact in structure and low in energy consumption. The equipment adopts a special design concept and features small size, light weight and low wheel ...

The bridge girder erecting machine is used to lift and support prefabricated bridge sections and bridges, suitable for a lifting range of 5 to 300 tons.

Designed to lift, align, and place precast bridge girders or segments with precision, it plays a vital role in ensuring project speed, safety, and structural accuracy.

Bridge construction is moving towards mechanization to reduce costs and improve quality. This relies on complex bridge erection machines that must handle heavy loads safely while being as lightweight as ...

The specified height on both sides of the longitudinal running track of the special highway bridge erecting machine should be level and stable. The horizontal running tracks of the front, middle and ...

Customized Beam Launcher for bridges with span ranging from 20m to 70m. Beam feeding from rear end of the Beam Launcher on the deck level or from below on ground level or from ...

Capable of lifting long-span, large-tonnage girders, with capacities often exceeding 900 tons. Advanced control systems ensure millimeter-level accuracy during girder alignment and placement. Suitable for ...

XCMG TJ series highway bridge girder erection machine has been fully affirmed by the customers because of high quality, high efficiency, high safety and strong operability.

Customized Beam Launcher for bridges with span ranging from 20m to 70m. Beam feeding from rear end of the Beam Launcher on the deck level or ...

Bridge girder erection cranes are designed to handle extremely massive and heavy girders, weighing anywhere from 100 to over 1000 tons. They can also support broad spans between piers, making ...
