The most basic version involves removing the insulation from the mid section of a wire; then wrapping another wire around the exposed section before soldering it in place.

The unused MC clamp on the bottom of the box had cut into a wire when I packed that big switch and all those wires into that little box. So naturally I removed the clamp (lesson learned). ...

Overview Insulated Wire 22- to 26-Gauge Wire 26+ Gauge Wire 26+ Gauge Wire If you have an old, bent wire, you probably know how hard it is to straighten out all the kinks. Even most new wires are coiled so they're bent before you get the chance to use them. Straightening wires prevents unsightly kinks if you're making jewelry, or makes them easier to organize and work with for any other project. If you need to straighten ... The best thing you can do for your wiring efforts is to buy a good pair of wire strippers. It might not hurt to create or buy a wire bending jig to allow you to make common lengths quickly.

The connection should be an even, smooth surface with no wires poking through. Following these steps will make your repair free of any future damage or corrosion by not allowing any type of weather in, ...

As long as you use at least six inches of wire, ensure the pigtail matches up to your circuit wire's gauge and insulation color, and you have ensured the power is switched off before starting ...

This short-length wire creates something like a last mile (or last inch) connectivity to create continuity to the endpoint. And you only need a scrap wire to make this connection.

If jumper wires are used for permanent fixings or modifications on a PCB, soldering them provides a strong connection. Applying flux to the joint before soldering enhances solder adhesion ...
