With the new generation of PoE smart control panels, you no longer need a neutral wire for installation, making the setup faster, simpler, and more cost-effective.

PoE injectors are devices that can be used to supply power to non-PoE ethernet cables by injecting power into the Ethernet cable. They receive a non-PoE data-only cable on the input side, ...

Non-POE switches are traditional network switches that do not have the built-in capability to deliver power over Ethernet cables. They are typically used in environments where POE is not required or in ...

Smartbyte non-PoE unmanaged Ethernet switches deliver reliable, maintenance-free network performance -- ideal for control and automation systems where stable data connectivity is critical, ...

I haven't experienced PoE killing a non-PoE device, but if you're actively worried about it you can always turn PoE off on a port-by-port basis or just blanket disable it for the entire switch.

If you are interested in a PoE vs Non-PoE Switch comparison, there is a table for that. We hope this information helps you decide between a PoE and a Non-PoE Switch.
