

Telecom Silk Road Optical Cable Project

On March 4, 2024, three cables under the Red Sea that provide global internet and telecommunications were damaged as a result of a Houthi attack on a cargo ship in the Red Sea.

In this new post, I'll build upon these previous topics by exploring the digital routes that are emerging in and around Turkey and Central Asia. I'll also look at how these routes can drive digital ...

For each realm discussed in this essay--undersea telecommunications cables, the mapping of the seabed floor, and deep-sea mining--exploration and expansion raise important ...

Initiated by NEQSOL Holding and implemented through its subsidiary AzerTelecom, the Digital Silk Way is a large-scale digital infrastructure project designed to build a high-capacity transit ...

In roughly the past decade, HMN Technologies has completed 108 projects laying down 60,000 kilometres of undersea cable, a total that is roughly one-and-a-half times the distance around ...

In particular, the five year plan emphasizes the creation of land and sea cable infrastructure, an Internet Silk Road between China and Arab States, and the creation of a China ...

It includes deployment of 5G networks, fiber optic cables, satellite communications, and data center facilities to support cross-border digital trade, e-commerce, and financial integration, including ...

The new Silk Road is a latticework of undersea fiber optic cables, carrying 99% of global internet traffic and facilitating over \$10 trillion worth of daily financial transactions.

China's rapid emergence as a leading subsea cable provider and owner has been the centerpiece of Beijing's ambitious Digital Silk Road initiative launched in 2015, which aims to capture ...

Submarine fiber-optic cables are critical infrastructure yet vulnerable to sabotage. This paper examines how the planned Pakistan and East Africa Connecting Europe (PEACE) cable from ...
