

The fiber optic distribution box was blown open by the wind

It is never recommended that the fiber connectors be exposed to rain. If water did migrate into the connection, it could impact signal levels and ultimately performance of your network. The service ...

Severe weather conditions such as storms, snow, and ice can lead to extensive physical damage to fiber optic infrastructure. High winds and flying debris can break aerial fiber lines, while ice accumulation ...

Aerial fiber optic cable installation is ideal for areas with existing utility poles or where ground disturbance is not practical. You suspend the cable above ground, which exposes it to wind, ...

This document outlines the steps necessary to restore fiber optic service to the home following a hurricane, including evaluation, repair, safety considerations, and the restoration of services.

Let us know if you find downed or uncovered wires or cables in your area.

Because fiber-optic cables use light rather than electricity as a transmission medium, fiber internet is immune to the effects of electrical interference from storms.

Back in 2011, an unnamed 75-year-old Georgian woman cut fiber access to the whole of the neighboring country of Armenia. While scavenging for copper her shovel went through the main fiber link between ...

You can't eliminate these threats, but you can protect your fiber optic cables from extreme weather by using the right equipment and following some best practices for handling.

Fiber optic cables enable high-speed, long-distance data transfer, forming the backbone of modern communication. Yet, outdoors, they face temperature swings, moisture, UV exposure, ...

Some of the above ground fiber optic networks were knocked out after enduring the 150 mph winds. Internet access was hard-hit where there were some near-total blackout conditions due to the ...
