Fibre Channel architecture provides various communication protocols on the storage system. The storage systems that are interconnected are referred to as nodes. Each node has one or more ports.

Fibre Channel offers point-to-point, switched and loop interfaces to deliver lossless, in-order, raw block data. Because Fibre Channel is many times faster than SCSI, it has replaced that ...

Fibre Channel may be implemented using any combination of the following three topologies: a point-to-point link between two ports a set of ports interconnected by a switching ...

The any-to-any connection service and peer-peer communication service provided by a fabric is fundamental to fibre channel architecture. Fibre channel can hold-up both channel and ...

The Fibre Channel physical layer is based on serial connections that use fiber optics to copper between corresponding pluggable modules. The modules may have a single lane, dual lanes or quad lanes ...
