

Use 100Mbps ports on the access switch

Older or lower-quality cables may not support higher speeds. Switch Port: Try connecting your AP to a different port on your switch. This can help determine if the issue is with the specific port. If you've ...

There may be scenarios in which it is required to make the AP to operate at a lower speed meaning, either at 100 Mbps or at 10 Mbps. This can also apply to the non-PoE port if you are ...

This article describes how you can configure and verify speed and duplex on a Cisco switch. Autonegotiation is also explained in the article.

It shows a connected port that auto-negotiates a link to 100 Mbps and half-duplex. The configuration that runs for this switch has no duplex or speed commands underneath interface ...

All of these devices support gigabit, however the access point says it's only connected at 100Mbps FD and the light on my switch is yellow meaning it is only at 100Mbps.

Most IPMI/out-of-band management ports run on 100Mb on purpose. Most of the time, you aren't and shouldn't be putting a lot of bandwidth through them. Also, the 100Mb controllers are much more ...

Now you have 105 Mbps of video that needs to be transferred, so a plain 100 Mbps switch is no longer sufficient because you won't be able to output all that video from any one port.

I just got a new EAP225-Outdoor and connected it to a gigabit Ethernet switch using the included PoE adaptor. On the EAP status page, it says the LAN port is "100Mbps - FD", and I ...

I'm designing in a gigabit switch with integrated 1000/100/10 Mbps PHYs, such as the KSZ9897. I want to wire up certain ports for only 100/10 Mbps speeds, with no support for 1 Gbps.

If the speed on the switch is set to 1-Gbps, the switch advertises 1-Gbps and 100-Mbps. If you have configured the speed to 100 Mbps on the switch, then you must also configure the speed as 100 ...

Use 100Mbps ports on the access switch
