Exhibiting the qualities, traits, or characteristics that identify a kind, class, group, or category: a typical suburban community. 2. Of or relating to a representative specimen; characteristic or distinctive. 3. ...

From the diagram it can be seen that the voltage across the laser diode is typically around 1.5 volts, although it is necessary to check the specification for the particular laser diode in being considered.

Noun typical (plural typicals) Anything that is typical, normal, or standard. Antipsychotic drugs can be divided into typicals and atypical. Among the moths, typicals were more common than ...

Operating Voltage : The voltage across the laser diode at the specified operating current. Wavelength : The output wavelength can vary from sample-to-sample and due to temperature.

Electrostatic damage to a laser diode is often a result of a current surge resulting from a static electrical discharge generated by a human body or a spike voltage associated with switching ...

A laser diode, similar to a light emitting diode (LED), is comprised of a junction between two semiconductors (one positive, one negative). This junction is known as a p-n junction.

TYPICAL definition: of the nature of or serving as a type or representative specimen. See examples of typical used in a sentence.

# What is the typical voltage of a laser diode

Driven by voltage, the doped p-n-transition allows for recombination of an electron with a hole. Due to the drop of the electron from a higher energy level to a lower one, radiation is generated in the form ...

If a particular action or feature is typical of someone or something, it shows their usual qualities or characteristics.

When you apply voltage across this junction, electrons and holes recombine, and each recombination releases a photon (a particle of light). This is exactly what happens inside an LED. ...

When something is typical, it is common, regular, expected -- hanging out with friends and playing computer games are typical activities of American teens.

The voltage drop of a laser diode is similar to standard semiconductor diodes and is often measured during electrical characterization. These measurements were made under the same ...

Typically, the voltage that appears with red and infrared wavelength diodes is between 1.5V and 3V but for green, blue, and ultraviolet the voltage is often above 5V. There is a distinct step ...
