

# ZX model distribution box

ZX ensures maximum operator safety. All high voltage compartments are enclosed to prevent accidental contact. As the high voltage compartments are independent of external influences (degree of protection IP65), the ...

ZX is the main product family of ABB's medium voltage gas-insulated (GIS) indoor switchgear for primary distribution. ZX distributes medium voltage electric power safely and reliably in a variety of ...

The use of digital protection and control technology, and plug-in connections makes the products in the ZX2.2 family unrestrictedly fit for the future, and the primary function of reliable power distribution is ...

ZX2, up to 40.5 kV (SF6), is a modular medium voltage switchgear for high demanding and harsh applications in primary distribution. Based on SF6, ZX2's modular structure distributes medium ...

Modular enclosure system for individual power distribution solutions and a broad product range for signal distribution. Available in all forms and configurations, also in special versions like ergonomic sensor ...

ABB's medium-voltage primary switchgear ZX series is well established around the world. The design is based on the fundamental principle of safety, reliability, modularity and scalability.

ZX Digital takes full advantage of new technologies such as temperature, environment humidity and gas pressure sensors, online condition monitoring and diagnostics provide a new way of working for the ...

The product family covers the entire spectrum of primary distribution applications. Flexible combination, reliability, availability and economy are the attributes that make it easy for our clients in industry and ...

In spite of the extremely low failure probability of the ZX switchgear systems, replacement of components in the gas compartments and therefore a rapid return to service after repairs is possible.
